Market Commentary

Stocks rose last week for the fourth consecutive week, the longest stretch since August of 2018. The focus shifted to corporate earnings, with several high-profile banks reporting quarterly earnings. Altogether, earnings were better than feared, and more importantly, commentary from management teams about the outlook was positive. As a result, the financial services sector outperformed the broader market, finishing 6% higher. Outside the U.S., news was more mixed. Markets reacted positively to Chinese efforts to stimulate the local economy and reports that China is willing to take

Past Issues and the U.K. Parliament rejected the Prime Minister's deal to leave the European Union and Theresa May survived the

vote of no confidence. What happens next is uncertain, but investors are increasingly speculating about a second referendum, or an extension of the Brexit deadline. Summing up, the S&P 500 has now quickly recovered more than half of its losses since September's peak. Because of the sharpness of the market's snap back, the market may now be overbought and the path from here could be rockier than it's been the last four weeks.

So, what's in store for 2019?

- We expect the pace of economic growth to slow in 2019 due to the waning effects of the tax cuts, which boosted GDP growth last year and the slowdown in interest-rate sensitive sectors like housing and autos. In our view, a recession in late 2019 or early 2020 is possible given the synchronized global slow down.
- The U.S. unemployment rate continues to hover near a 50-year low, and it's expected to move slightly lower this year due to continued job growth. Historically, the unemployment rate increased an average of nearly 0.5% before a recession began. Wage growth and lower gasoline prices should also add to consumer continued consumer spending through the first half of 2019.
- The international markets will experience slower growth this year. While the Fed is increasing interest rates, foreign rates remain low, and monetary policies are still boosting growth in Europe and Japan. Additionally, low unemployment rates and rising profit margins are likely to slightly improve earnings growth internationally, in contrast to decelerating S&P 500 earnings. China is also ramping up stimulus to soften its slowdown.
- Trade is an important part of global growth, and uncertainty surrounding trade negotiations was a key source of market volatility in 2018. The U.S. entered 2019 with some progress to the trade conflicts, including a proposed trade agreement with Canada and Mexico as well as progress in trade talks with China.
- International markets and economic conditions appear to be earlier I the economic cycle than the U.S., and equity valuations are more attractive, supporting an above-average allocation to international equity investments.

Late last year stocks became very volatile as investors reacted to a slew of concerns, including increasing interest rates, slower global growth, and trade tensions. These worries won't disappear in 2019 and increased volatility will continue. However, stocks have bounced back sharply from their lows and re-energized the bull market, rising 13.5% in the first three weeks of the year.

Victoria Capital's Strategy Update

The surprising stock market rally that began the day after Christmas continues to gather adherents as economic data continue to suggest a growing economy. Even though professional investment analysts have been lowering growth expectations for corporate earnings, early reports indicate that surprises continue to be generally on the upside. After all, we have had six consecutive quarters of double-digit earnings growth and the last three quarters were more than 20%— a rate that is difficult to maintain. There remains a cadre of naysayers who are forecasting an economic and stock market collapse right around the corner. While anything is possible, we tend to believe that bad news sells, and stocks continue to climb the "Wall of Worry". The underlying fundamentals of the U.S. economy remain intact as do those for the stock market. The former is supported by continued low interest rates, record low unemployment, real wage gains without pressure on inflation, low yield spreads, a strong-but-not-too-strong dollar and favorable fiscal policy. Mr. Market is supported by favorable valuations after the fourth quarter sell-off, a positive risk-reward scenario relative to bonds, under

hedge funds that, in turn, triggered further selling by algorithms and computer trading. So, if selling begets selling, where can support for financial markets come from when the only problem is the market itself?

The greatest source of support comes from the Federal Reserve! Many argue that the Fed controls interest rates and thereby the direction of the economy. Unfortunately, this relationship cannot be proven. What has been proven is that the Fed serves as the lender of last resort providing a safety net to financial markets. Witness the day after Black Monday in 1987 when trading in stocks was shutting down one by one on the exchange and many feared that a "collapse" was near. Fortunately, the lender of last resort, the Fed, stepped in and bankrolled the specialists on the New York Stock Exchange so that they could go on a buying spree to avoid a market meltdown.

Maybe something similar happened on December 27th when the Dow Jones Industrial Average rose a record 1084 points supposedly due to a good employment report. Hardly. Perhaps the Fed thought an emergency was imminent and wanted to stop further declines in the market. Some will say this Fed "put" (the Fed steps in anytime there is a selloff) is imagined but we do know that the Fed bought trillions of dollars in mortgage-backed securities pools in 2008 and 2009 to avoid a collapse in mortgage markets and the big brokerage firms and banks. Remember that the Federal Reserve has an infinite checkbook since the U.S. operates on a fiat currency model. Any country that has its own currency has the same model. Note that the Swiss central bank and the Japanese central bank both buy stocks either directly or through ETFs.

During the past week, we did not make any changes in the Target Return portfolios. However, we did sell selected securities in the Equity Growth portfolio and are looking to deploy some cash into promising growth opportunities once the dust clears.

Redhawk's Strategy Update

Last week stocks posted their biggest daily gain of the week on Friday amid signs of potential progress in the U.S. and China trade dispute, including the possibility that China might commit to buy more U.S. goods. China's top trade negotiator is scheduled to visit Washington on January 30 for two days of talks. The partial government shutdown was cited as one of the factors that's fueled a decline in consumer confidence. The University of Michigan reported on Friday that its survey of consumer sentiment recorded a sharp monthly decline to the lowest level in more than two years.

Although market volatility picked up in late 2018, major banks didn't see an increase in trading revenue. The five largest banks reported their combined revenue from trading operations in the fourth quarter fell 6% from a year earlier. S&P Dow Jones Indices is projecting that dividend payments this year by companies in the S&P 500 will grow 7% to 8%. That

Tuesday:

1. Existing home sales, National Association of Realtors.

і. но парі терона зопечиси.

Thursday:

1. The Conference Board Leading Economic Index for the U.S.

Friday:

- 1. New home sales, U.S. Census Bureau.
- 2. Durable goods orders, U.S. Census Bureau.

The algorithms have been in the "Risk Off" defensive position since 12/19/2018. The stochastic models in place have concluded that precious metals, utilities, and consumer staples are the non-correlated asset classes to invest for this defensive period. We will continue to gather relevant data points on the market while in this risk off period.

Portfolio Managers

The Target Return (TR) portfolios consist of a blend of exchange-traded funds (ETFs) to provide a range of risk and return characteristics that should meet the needs of investors saving for retirement. Each of these portfolios is designed to achieve a long-term target rate of return. By utilizing low cost ETFs and by keeping portfolio turnover low, the ability to produce targeted rates of return is dramatically increased. For investors seeking current income, the TR Income Portfolio (TRIP) has been structured to focus on producing both high current income and growing dividend income. The goal of the Victoria Capital Growth (VCG) portfolio is to provide long-term growth through a diversified portfolio of individual equities. A theme-based investment strategy concentrates investments in common stocks of companies that are expected to grow faster than the overall economy. Owning individual stocks gives greater flexibility to make changes on a stock by stock basis for each client. By applying a bottom-up defensive tactical trading discipline, substantial portfolio reserves can be generated.
